EDUCATION

Masters of Science in Computer Science and Engineering

Politecnico di Milano

2024 - 2027 Milan

- Track- AI

Bachelor of Engineering in Information Technology

Pune Institute of Computer Technology

2019 - 2023 Pune

CGPA
9.43 / 10.00

PROJECTS

Casa Gurug´

https://casagurugu.com/

- Built a production full-stack web application for a resort in Tenerife, Spain, serving as the property's primary digital presence.
- Integrated Stripe payment processing with multiple payment options, enabling seamless online bookings
- Adopted a headless CMS architecture using Sanity, empowering staff to manage content without developer involvement
- Created a multi-page product experience covering booking, blog, house tour, property history, and more.
- Achieved 50+ confirmed bookings and 100+ weekly visitors organically through the website

Carbon Tracker

https://github.com/Shubham1632/CarbonTracker

- Developed a Chrome extension to monitor and display users' carbon footprint.
- Calculated real-time browsing and ChatGPT usage data to provide comparative carbon-impact analytics.
- Designed intuitive, customizable widgets to help users structure the application.
- Built a floating pop-up for the ChatGPT website that provides real-time usage analysis.
- Enabled time-based reports (daily, weekly, monthly) with CSV export support
- Achieved 150+ active users on chrome web store.

Dauth

https://github.com/Shubham1632/Dauth

- Built an npm package to add blockchain-based SSO to Node.js applications.
- Reduced development effort by enabling user authentication through an npm package.
- Reached 200+ downloads in the first week of launch and was used in student projects for authentication.
- Removed dependence on traditional authentication approaches while improving security and transparency.

SKILLS

Frontend & Backend

React · React Native · Next.js · Angular · HTML · CSS · Tailwind CSS · Node.js · Nest.js · GraphQL · REST APIs

Languages, Data, Testing & AI

TypeScript · JavaScript · Python · Java · C++ · SQLite · MongoDB · Jest · JUnit · AssertJ · Docker · Terraform · Git · GitHub · CI/CD · OpenAI API · LLMs · Vector Embeddings

SUMMARY

Full Stack Developer with experience building web and mobile products across React, React Native, Next.js, Angular, Nest.js, and Node.js, with a strong focus on problem-solving, scalable systems, and product quality. Delivered production applications spanning booking flows, internal portals, Chrome extensions, and developer tools, including AI-assisted development work with LLMs, payments, offline-first mobile features, authentication, and headless CMS architectures. Comfortable collaborating across teams, adapting quickly to new product domains, and shipping reliable software that improves real user workflows.

EXPERIENCE

Full Stack Intern

PENGUINPASS SRL

11/2024 - 01/2025 Milan, ITA

- Enhanced an event management portal by refactoring the codebase and adding scalable product features.
- Developed a multi-platform mobile application from the ground up using React Native, SQLite, and GraphQL for cross-team product delivery.
- Implemented offline support in the mobile application to solve network reliability issues and improve usability for users on the go.
- Improved a legacy React Native application by resolving critical bugs and adapting new functionality to existing product constraints.

Software Craftsperson

INCUBYTE

07/2023 - 09/2024 Remote, IND

- Built an AI-based solution accelerator with Next.js and LLMs to support faster, lower-cost application modernization.
- Used OpenAI APIs to design intelligent workflows for visualizing, managing, and rebuilding legacy systems.
- Applied vector embeddings to model codebase relationships and restructure modules by semantic relevance, improving problem-solving for legacy modernization work.

Software Development Intern

INCUBYTE

01/2023 - 07/2023 Remote, IND

- Built a portal to manage outdoor events and reduce repetitive operational tasks for a remote team, adapting quickly to product and workflow needs.
- Used Angular for the UI and Nest.js for refactored, well-tested APIs.
- Implemented Azure Active Directory authentication for secure, reliable user access.
- Worked with strong engineering practices including TDD and clean code to improve reliability, maintainability, and teamwork across development.

Summer Intern

PERSISTENT SYSTEMS LTD

06/2022 - 08/2022 Pune, India

- Reduced the loading time of the application by 40% by implementing lazy loading.
- Removed the unconditional redirect to the homepage by reconfiguring the application's routing.
- Simplified the component tree by refactoring the component structure.
- Fixed the background animation bug by configuring the correct coordinates for each component.
